

```
public class MyComponentViewController:  
    ReactViewController {  
  
    override open var componentName: String {  
        return "MyReactComponent"  
    }  
  
    override open func props() -> [String: AnyObject]  
        return ["title": "Hello World"]  
    }
```

```
public class MyComponentViewController:
    ReactViewController {

    override open var componentName: String {
        return "MyReactComponent"
    }

    override open fun props() -> [String: AnyObject]
        return ["title": "Hello World"]
    }
```
