

The diagram illustrates the architectural differences between a Native App and React-Native. On the left, the Native App architecture is shown with a single layer labeled 'AppDelegate' at the top of a dark gray container. On the right, the React-Native architecture is shown with a dark gray container at the top and a dark blue container below it. The dark blue container contains three stacked light blue boxes labeled 'Component-Module', 'Component', and 'Component' from top to bottom. The labels 'Native App' and 'React-Native' are centered below their respective diagrams.
