

So much boilerplate!

ReactViewController.swift

```
class ReactViewController {  
  
    private func propsWithReference() ->  
        [String: AnyObject]  
    {  
        var viewProps = props()  
        viewProps["reference"] =  
            ObjectReference.reference(forObject: self)  
        return viewProps  
    }  
}
```
