```swift
public class MyComponentViewController:
  ReactViewController {

    override open var componentName: String {
        return "MyReactComponent"
    }

    override open func props() -> [String: AnyObject]
        return ["title": "Hello World"]
    }
```

```swift
public class MyComponentViewController:
  ReactViewController {

    override open var componentName: String {
        return "MyReactComponent"
    }

    override open func props() -> [String: AnyObject]
        return ["title": "Hello World"]
    }
```
